Startup Flow

Problem → validation → Idea → AI Architecture → MVP → Testing → Demo → Business Story → Submission

Phase 0 Team Setup.

- Name
- Startup Name
- Members Responsibility
- Group, Shared Drive
- Github Repo
- Notion Board
- Common doc
- Communication Rule
- Standup Time

Members responsibilities

product + strategy
- Problem research, User person
- PRD, Business model
- Pitch, Doc
- AI + Backend
- Frontend + Design.

Phase 1 - Hackathon Understanding

- Rules, Judging criteria, format
- Team, technology, leading
- Requirements, deadline, submission
- Judging Matrix (Criterion, what judge want, our evidence)

Phase 2. - Problem Discovery

- What painful problem deserves AI-native solution
- Brainstorm 20-30 probs
- Categorize it
- Identify : - Repetitive/manual task
  - Decision-making problem
  - Info overload problem
  - Coordination problem
  - workflow problem
  - Where AI can take actions

  - Research competition
  - Identify solution
  - Identify gap
  - Identify target users
  - Frequency of problem
  - Severity of problem
  - Willingness to pay

- Select one, one-sentence Problem Statement, One-sentence Target user definition

Phase 3 - Sol^n Definition

- Name
- One line value proposition (Offer, Target User, Why it is better)
- Target customer
- User persona
- Core user Journey
- Main ~~point~~ pain point
- Existing alter fails (why)
- Why AI is necessary
- Why your solution must be AI-First (Magic Moment - Build MVP around it)

Phase 4 - Product Specification

- Simple PRD

(Problem, Solution, Target User, User journey, FR, AI req, Non-AI req. Input, Output, Integration, Security (privacy consideration Performance expectation, future feature.)

(Must have, Should have, Could have, Don't Build)

MVP — small but impressive

Phase 5 - AI Architecture

- Decide model(s), prompting strategy, Agent Architecture, Decide tools ; Decide memory requirements, knowledge (RAG req.; Decide data sources, Orchestration framework, APIs, fallback logic, Human in loop, Hallucination protection, evaluation metrics.

User → UI → AI Orchestrator → Agent/Models → Tools/data → Output, Documents, AI evaluation.

Phase 6 - Technical Setup.

Phase 7 - MVP Development.

Phase 8 - First Working Demo

Phase 9 - Testing + Refinement

Phase 10 - Feel like a Startup

Phase 11 - Demo Engineering

Phase 12 - Pitch Deck

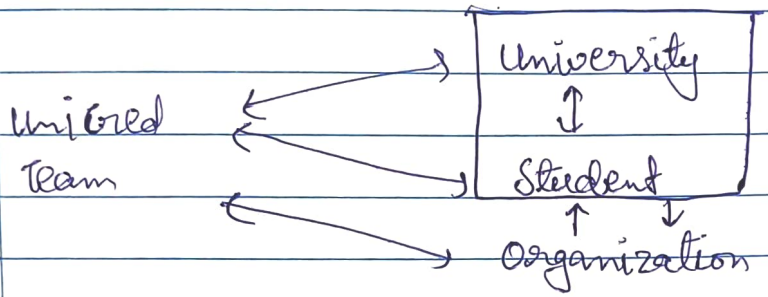

Phase 13 - Submission Document

Phase 14 - Final QL

Phase 15 - Final Submission

PS: No Proof of Work, Hiring Stress, Resume don't represent or verify actual skills.

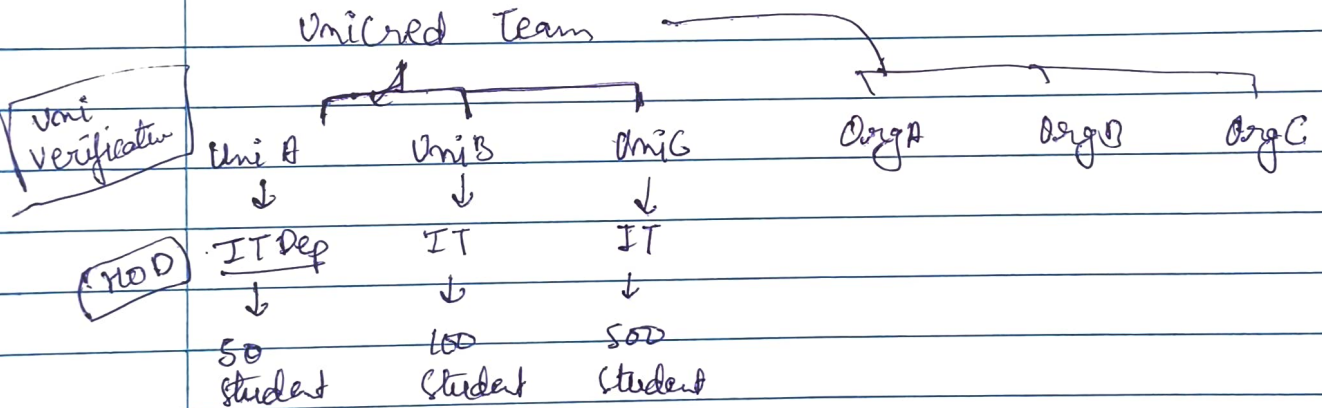

UniCred

People are
Saying AI job khaygi
So we built a system
Jaisa AI job dilaygi

Ravi's POV and approach

Inshort - Static CRED Application

UniCred MVP

→ 2 Department IT/CS, Management
→ 50 - 100 Student AI-Verified Demo Video Portfolio
→ 3-5 Company direct Hiring

Phase 1:

1. Beachhead Target Group.
   - Student : IT/CS, 50-100.
   - Verification : ID, Dual Email Linking
   - Proof-of-work
2. Core AI Engine for MVP.
   - OCR/Vision AI Agent : ID data extraction
   - Multimodal Video Verification Agent
     - Audio AI
     - Vision AI
     - Generative Script
   - A 'Verified Skill Score & Graph'

Phase 2: Product Architecture

A. Student Web App (Proof Creator)
   - Simple Onboarding.
   - Project Submission
   - Living Skill Graph

B. University Dashboard.
   - Approval Queue
   - One-Click Approval.

C. Recruiter Dashboard
   - No Resume Search
   - Demo Playback

Phase 3: Pilot Execution

Step 1 - Departmental Onboarding
Step 2 - Student BootCamp (Video Proof)
Step 3 - AI Processing & Score

Phase 4 - Pilot Success Metrics

Problem Statement :

Traditional Resumes fails to verify actual skill and experience, leaving skilled students overlooked from Tier-3 and forcing employers to rely on unreliable credentials and manual verification.

Solution :

UniCred — a AI-driven credentialing / skill verification platform (Digital Resume?) that :

- Authenticates capabilities (Automatically)
- Manage Profile Seamlessly
- Connect verified / skilled talent with opportunities directly (using predictive matching)

Eliminating reliance on traditional resumes.

Users :

(MVP) →
- Only Tech Students, IT/CS Department/School of Universities, Verified Organisation / Recruites

OR

- IT + Management Students, IT + Managment School of Universities, Verified Org. / Recruites

OR

- All Students, All Univerities Department, Verified Org. / Recruites.

User Personna

1 Student : (Tier 2/3)

(MVP) →

(A.) Raju, 20 year, Goal : Get Job / Placement
Pain Point : Resume not getting shortlisted.
How Unicred Helps : Gets you shortlisted

(B) Riya, 18 year, Goal : Get Job / Internship
Pain Point : No skills yet, To many Resources.
How Unicred Helps : Give Projects based on skill

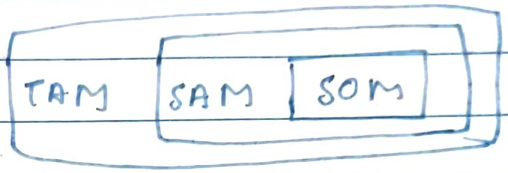

(C) Priya, 21 year, Goal: Get good pay job based on her skills
Pain Point: Unable to manage Resume / Profile, so not getting shortlisted.
UniCred: Get you ranked based on skill since profile is seamlessly managed.

2. University
(A) Uni A, Tier-3, Goal: Placement and Reputation
Pain Point: Theory vs Practical Gap, No Placement Analytics Data available
(MVP) → UniCred: When students get placed based on their practical skill, they can track their records which indirectly improves ranking.

3. Organization / Recruiter
(A) Org A, Coperate, Goal: Hire skilled people with minimum Hiring & Training Cost.
(MVP) → Pain Point: Unverified skills, High Cost, Not able to verify skills based on Resume which leads to Bad Hiring
UniCred: Find best fit with minimal cost.

Market & Competitor Analysis :

Market Size

1. TAM (Total Addressable Market)
   Potential Customer globally × Annual revenue/user

2. SAM (Serviceable Addressable Market)
   Target Segments in India × Annual Revence / User.

3. SOM (Serviceable Obtainable Market)
   Realistic portion of SAM (%) × SAM

↓

2 year target based on MVC and SOM

In next 2 year, 100 universities and 800 org.
↓
~ 5000 student

- University license fee → 2 lkh
- → Student Registration
  - Basic Acess → 0
  - Premium (Job search) → 199 - 499 (Placement Activity fee) or
- → Org Subscription fee → ~~50000~~ 6 lkh

SOM = 100 × 2 l + 5000 × 300 + 800 × 6 l
= 200 l + 15 l + 4800 l
= 50.15 Cr.

Initial target for few month

SOM = 8 × 50,000 + 1000 × 50 + 30 × 45000 (3 months)
= ~~4,00,000 + 50,000~~
= 15,50,000

2. Direct & Indirect Competitors

Direct Competitors	Indirect	UniCred
↓	↓	↓
LinkedIn	Campus Placement	
Internshala	~~Job Portals~~	
Naukri.com	Recruiter Agency	
Indeed	LinkedIn (Referal	
~~Recruiting~~	Onsite Hiring	
Job Portals	Github / Kaggle / Behance	
* Unstop	~~Whatsapp / Email~~	

3. "Moat" (Unfair Advantage)

(Things which competitors cannot copy)

→ Network Effect : More student with verified skill, more Org, → more student
→ Proprietary Data & Proof of work : Score available in our platform, Unique DB
→ High Switching Cost : Future of Placement & Hiring
→ Distribution Advantage : Partnerships
→ Embedding in Workflow : HR ATS Tool or University LMS data integration

Self Assessment verified Proof of work.
→ Student Data (Placed, Unplaced) from each Uni
→ Tier 2/3 University Licensing (MOU), Onboarding Barriers, Data Ownership
→ Habit use, Living Skill Graph.
→ User will bring others.

Our moat is network effect, Proprietary data, High Switching cost because when student upload project, recruiter gain trust on our platform which cannot be copyied by other without unique data

Self-Assessment Test :-

- Unique Asset :
  - Verified Proof of Work Graph (AI Model verified)
  - Institutional Verification Tag (Placed/Verified student data)
- Duplication & Friction
  - 1 yr and 1.5 yr.
  - Onboarding Barrier. (TPO networking)
  - Privacy & Consent Architecture (Blind Anonymized Matching)
- Habit Formation
  - Student Living Skill Graph.
  - Top Rated Candidate Hiring for Recruiter.
- Viral & Network Effect.
  - Trojan Horse strategy for student
  - Institutional Network effect. : Self onboarding of Uni.

Monetization & Feasibility

Primary Revenue Model

1. Recruiters (Primary) (Retention Problem)
   - Subscription (SaaS) less vacancy
   - Pay-per-Hire
2. Universities
   - Licensing : TPO Dashboard & Student verification
   - Paid Enterprise Tiers = Skill-Gap Analysis, other features
3. Student
   - Free
   - Premium (Job Search)

Initial CAC (Customer Acquisition Cost) and LTV (Lifetime Value)

1. Recruiter CAC : 15000 - 25K (Direct outreach)
2. Student CAC : University Direct / viral reachout
   15000 - 25K

Recruiter LTV : 15L - 25L (Repeat Hiring)

LTV : CAC → 6 : 1

Willingness to Pay Testing

- Recruiter Hiring Feedback
- Hiring commission Aggreemat
- Waitlist Strategy

Legal, Regulatary & Compliance Requirement

- DPDP Act 2023 (India) & Data Privacy
- Student Data Ownership
- AI Ethics & Anti Bias :
- IP protection

Execution Planning

MVP (Minimum ~~Valtrab~~ Viable Product) Features

- AI Video & Audio Skill Audit Engine
- ORR-Based ID & University Verification
- Living Skill Graph & Dynamic Scorecard.
- Zero-knowledge Anonymized Matchmaking
- Consent-Based Access Portal.

Success Metrics & KPIs for MVP.

Activation & Verification
Recruiter Engagement
System Accuracy
Viral Growth
Institutional Coverage

Timeline for Building & Testing

Week 1-2 : Core Architecture & Pipeline
Week 3-4 : AI Verification, ORR Development
Week 5-6 : University Portal & Student Skill Graph Dashboard Setup
Week 7 : Alpha launch Testing
Week 8 : Beta launch

Detailed User Flow (MVP Based)

Ravi's POV (Static CRED application) to (AI - First application)

	Uni A	Uni B	Uni C	Uni D
	Tier 2 (Std_email)	Tier 3 No email	Apply for Access	Not Registered
(New)	Aman	Nikhil	Sumit	
First	Ajay	Neha	Sourav	Priya
Second	Aarav	Naman	Sam	Adarsh.
Third	Akshit	Naveen	Shiva	
Dropout	Aarti	Nita	Shruti	
Alumni	Avi	Niya	Sohan	
Masters				

Org A (Mid size) | Org B (Start-up) | Recruiters (MNC)

Initial Marketing cost & Process Delay — Direct Reachout

Uni Cred

Pay for Licensing (Freemium) student Registration

Uni A & Uni B

Registered by Uni email

6 student

Faculty

6 student

Faculty

Registered By Own email & ID need to verify

Manual work of ID verification

Faculty (Verify & Provide Project)

Can view org Page

BI Agent Architecture

- Vision - OCR and Fraud Detection Agent
- Proof - of Work & Multimodal Video Analysis
  (Multimodal Proof Audit Engine)
  Audio + Vision + Script
- Predictive Blind Matching agent.
- Consent & Security Handler.
- Career Progression & Alumni Agent.
- Skill based Project Assigning Model.
