User Personas & Profiles

Institution-first buyer, student user and recruiter hypotheses

Version 1.0 • 30 October 2026

Research note: distinguish sourced facts from estimates and strategic hypotheses. Market sizing below is a transparent planning model, not an independently verified market-revenue forecast.

1. Purpose and research status

These are hypothesis personas derived from AptoHire's stated product model and initial priority of universities. They are not validated research personas. The survey link is available, but no response export or interview transcript set was supplied; demographics, quotes and behavioral claims are intentionally not invented.

2. Primary buyer persona — placement / career services leader

Persona: "The Outcomes-Oriented TPO"

Attribute	Working hypothesis
Role	Training & Placement Officer, career-services director, dean or employability lead.
Primary objective	Improve student readiness, placement outcomes and employer confidence while managing limited staff time.
Pain points to validate	Inconsistent student skill evidence; fragmented placement data; difficulty showing readiness gaps; repeated manual coordination.
Success definition	More students become demonstrably ready, employers engage with relevant candidates, and the institution can explain outcomes.
Buying concerns	Budget owner ambiguity, implementation workload, data privacy, student adoption, faculty buy-in, integration and measurable ROI.
Likely objections	"We already have a placement portal"; "Who will verify scores?"; "Will employers use it?"; "How much effort is required?"
Message to test	"Turn project work into evidence-backed skills and actionable cohort insights—without giving employers student identity before consent."
Evidence needed	Current workflow map, budget and procurement path, number of active cohorts, baseline placement metrics, willingness-to-pay and pilot success criteria.

3. Secondary user persona — student

Persona: "The Capability-First Student"

Attribute	Working hypothesis
Role / context	UG/PG student or recent graduate, potentially from an institution with limited employer visibility.
Primary objective	Show real ability, improve skills, and access internships or entry-level roles.
Pain points to validate	Resume does not fully reflect capability; limited experience; uncertainty about skill gaps; fear of opaque scoring or unfair rejection.
Motivation	Useful feedback, a credible portfolio, fair discovery and control over personal information.
Trust requirements	Clear rubric, evidence links, ability to correct profile data, appeal process, consent choice and transparent sharing scope.
Adoption barriers	Project workload, mobile/network constraints, doubts about employer recognition, privacy concerns and duplicate effort.
Message to test	"Show what you can do—not only what your CV says. You choose when your identity is shared."
Evidence needed	Task completion, willingness to submit evidence, comprehension of scorecard, consent behavior, appeal expectations and repeat usage.

4. Secondary buyer persona — early-career recruiter

Persona: “The Signal-Seeking Recruiter”

Attribute	Working hypothesis
Role / context	Recruiter, talent acquisition partner or hiring manager filling internship and junior roles.
Primary objective	Identify capable candidates quickly and reduce avoidable screening effort.
Pain points to validate	Resume keyword noise, inconsistent candidate evidence, too many low-fit applications and difficulty comparing projects.
Success definition	Relevant shortlist, explainable match reasons, fewer manual screens and acceptable interview-to-offer conversion.
Trust requirements	Evidence provenance, standardized criteria, clear confidence, bias monitoring and ability to request more information.
Adoption barriers	Existing ATS, concern about scores, low candidate volume, integration effort and reluctance to ask candidates to join another platform.
Message to test	“Explore anonymized candidates with project evidence and skill-match explanations; request identity only when the candidate agrees.”
Evidence needed	Time-on-task benchmark, recruiter blind review, match relevance rating, access-request conversion and hiring outcomes.

5. Institutional decision-making unit

Stakeholder	Likely concern	Role in sale
TPO / career services	Placement outcomes, workflow fit	Champion / operational owner
Dean / registrar / leadership	Institutional value, risk, reputation	Economic buyer / approver
IT / security	SSO, data access, integration, security	Technical approver
Faculty / department heads	Fairness, rubric relevance, student workload	Influencer / adoption partner
Students	Value, transparency, privacy, effort	End users and adoption drivers
Employers	Signal usefulness and candidate volume	Demand-side validation partner

6. Discovery interview questions

• Walk me through the last placement cycle from student preparation to employer shortlist.

• Where do staff spend the most time collecting, validating or explaining student skills?

• What evidence do employers currently trust beyond CVs and CGPA?

• What placement or readiness metrics do you report, and where does the data come from?

• Who owns the budget and approval process for a new placement tool?

• What would make a 6–8 week pilot worth continuing? What outcome would make you stop?

• For students: would you submit a project and review a rubric-based scorecard? What would make it feel fair?

• For recruiters: would anonymized evidence cards be useful? What minimum evidence would you need before requesting identity?

7. Validation scorecard

Hypothesis	Evidence threshold to predefine before testing
Institution has urgent pain	At least 5 of 10 interviews independently describe the same costly workflow problem.
Champion and budget exist	At least 3 institutions identify a named owner, approval path and plausible budget source.
Student will complete evidence workflow	Observed completion and comprehension in moderated usability tests; record drop-offs and time.
Employer trusts the signal	Recruiters rate anonymized evidence cards as useful and can explain why; compare with baseline screening.
Privacy is a differentiator	Users correctly understand reveal scope, duration and withdrawal without prompting.

AptoHire

8. Source note

Persona content is strategic hypothesis, not survey findings. Validate using direct interviews, usability sessions, and the actual survey response export before using quotes or demographic claims.
